Spherical cap (R=10 m, half-angle 30 deg), BEM mesh m=2, f=100 Hz, kR=18.3: per-face pressure, top view (x,y).
Caution: m=2 has only 5.24 elements per wavelength (below 6). Jump-sign s = +1.
I+/I- panels: linear scale, symmetric limits = max|I| over both faces of the row (not saturated).
